Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently amended) A shaving apparatus comprising:

a head holder including at least one shaving head including a shaving surface for contacting the skin during shaving and at least one cutter ~~that is~~ moveable behind the shaving surface;

a housing having first and second ends for carrying a drive structure at the first end and for enclosing ~~including~~ a motor coupled to the drive structure ~~at least one cutter~~ for driving the ~~movement of~~ the at least one cutter; and at least part of an electric power supply ~~means~~ connected to the motor, the electric power supply having a power plug socket at the second end; and ~~a housing containing the motor and at least part of the electric power supply means and carrying the drive structure;~~

a shell structure for enveloping at least ~~a circumference of~~ the housing ~~behind the at least one shaving head when mounted to the housing; and a shaving head holder support carrying a shaving head holder to which the at least one shaving head is mounted~~, ~~wherein~~ the shell structure extends at least from ~~a face against which the at least one shaving~~ the head holder ~~support is mounted~~ to ~~a~~ the power plug socket ~~at an end of the housing opposite from the face against which the at least one shaving head holder support is mounted, wherein the shell structure~~ and fully envelopes the housing ~~at least between the~~

~~face against which the at least one shaving head holder support is mounted and the power plug socket, and wherein the housing extends at least from the face against which the at least one shaving head holder support is mounted to the power plug socket fully enclosing a space between the face and the power plug socket~~.

2. (Canceled)

3. (Canceled)

4. (Previously presented) The shaving apparatus according to claim 1, wherein the shell structure includes shell portions spaced from the housing such that an interspace is left between the housing and said shell portions.

5. (Previously presented) The shaving apparatus according to claim 4, further comprising at least one draining passage for draining the interspace between the housing and the shell structure.

6. (Previously presented) The shaving apparatus according to claim 1, wherein at least a portion of the shell structure is of a more impact resistant material than the housing.

7. (Previously presented) The shaving apparatus according to claim 1, wherein at least a portion of the shell structure is of a softer material than the housing.

8. (Currently amended) The shaving apparatus according to claim 1, wherein the housing includes at least ~~a first~~ one operating member and ~~wherein~~ the shell structure includes at least ~~a second operating~~ one manipulating member operatively connected with said ~~first~~ operating member.

9. (Currently amended) The shaving apparatus according to claim 8, wherein said manipulating~~second operating~~ member is mechanically connected with said ~~first~~ operating member.

10. (Currently amended) The shaving apparatus according to claim 8, wherein said manipulating ~~second operating~~ member is electrically connected with said ~~first~~ operating member.

11. (Currently amended) The shaving apparatus according to claim 1, wherein the housing includes at least one ~~further comprising an~~ optical signaling member, and said shell structure including a window via which optical signals generated by said optical signaling member are visible.

12. (Previously presented) The shaving apparatus according to claim 1, wherein the shell structure is detachable from the housing.

13. (Currently amended) ~~An assortment of at least two shaving apparatuses, each~~ The shaving apparatus according to claim 1, wherein the shell structure is selected from a plurality of ~~said housings of at least two of said apparatuses have mutually identical shapes and wherein at least portions of two of said shell structures of said at least two apparatuses that cover mutually corresponding portions of the housings of said at least two apparatuses have mutually~~ different shapes.

14. (Currently amended) ~~An assortment comprising at least one~~ The shaving apparatus according to claim 13~~1 and at least two of said shell structures~~, wherein said shell structures having different shapes are alternatively ~~each~~ mountable ~~to~~ on said housing ~~as an alternative for the other one of said shell structures~~ and ~~wherein at least portions of two of said shell structures that, when in mounted condition,~~ cover the same portions of said housing ~~have mutually different shapes~~.

15. (Currently amended) A method of manufacturing a shaving apparatus, comprising a head holder including at least one shaving head including a shaving surface for contacting the skin during shaving and at least one cutter moveable behind the shaving surface~~;~~ ~~a drive structure including a motor and coupled to the at least one cutter for driving movement of the at least one cutter; electric power supply connected to the motor;~~ the method comprising acts of:

manufacturing a housing having first and second ends for carrying a drive structure at the first end and for enclosing ~~containing the~~ a motor coupled to the drive structure for

driving the at least one cutter and at least part of ~~the~~ an electric power supply connected to the motor, the electric power supply having a power plug socket at the second end~~means and carrying the drive structure~~; and

manufacturing a shell structure ~~mostly~~ for enveloping the housing ~~behind the at least one shaving head up to a power plug socket when mounted to the housing~~, ~~wherein~~ the shell structure is spaced from the housing such that an interspace is left between the housing and said shell structure,

wherein the act of manufacturing the ~~housing comprises an act of manufacturing the~~ extends the ~~housing to extend~~ shell structure extends the shell structure at least from the ~~face against which the at least one shaving~~ head holder ~~support is mounted~~ to the power plug socket fully enclosing ~~a space between the face and the power plug socket~~ the housing.

16. (Currently amended) The method according to claim 15, further comprising an act of manufacturing at least one draining passage for draining the interspace between the housing and the shell structure.

17. (Canceled)

18. (Currently amended) The shaving apparatus according to claim 1, wherein the electric power supply ~~means~~ includes a battery and ~~wherein~~ the housing fully encloses the battery between the first and second ends~~face and the power plug socket~~.

19. (Currently amended) The shaving apparatus according to claim 1, wherein the electric power supply ~~means~~ includes a battery and wherein the housing fully encloses the battery and the motor between the first and second ends~~face and the power plug socket~~.

20. (Currently amended) The shaving apparatus according to claim 1, wherein the electric power supply ~~means~~ includes a battery and control circuitry and wherein the housing fully encloses the battery and the control circuitry between the first and second ends~~face and the power plug socket~~.

21. (Previously presented) The shaving apparatus according to claim 1, wherein the housing is waterproof between the face and the power plug socket such that water can not enter the space.

22. (Currently amended) The method according to claim 15, wherein the electric power supply ~~means~~ includes a battery and wherein the act of manufacturing the housing comprises an act of manufacturing the housing to fully enclose the battery between the first and second ends~~face and the power plug socket~~.

23. (Previously presented) The method according to claim 15, wherein the act of manufacturing the housing comprises an act of manufacturing the housing to be waterproof between the face and the power plug socket such that water can not enter the space.

24. (New) A method of providing a shaving apparatus, comprising a head holder including at least one shaving head including a shaving surface for contacting the skin during shaving and at least one cutter moveable behind the shaving surface, the method comprising acts of:

providing a housing having first and second ends carrying a drive structure at the first end and enclosing a motor coupled to the drive structure for driving the at least one cutter and at least part of an electric power supply connected to the motor, the electric power supply having a power plug socket at the second end; and

providing a shell structure for enveloping the housing, the shell structure spaced from the housing such that an interspace is left between the housing and said shell structure,

wherein the shell structure extends at least from the head holder to the power plug socket fully enclosing the housing.
